

# Rabbit anti NF-кВ p65(pT254) Polyclonal Antibody

Alternative Name(s): nuclear factor kappa B subunit p65; NFkB

### **Order Information**

• Description: NF-кВ p65(pT254)

• Catalogue: 500-11934

Lot: See labelSize: 100ug/200ulHost: Rabbit

• Clone: nan • Application: IHC(P), WB, IP

• Reactivity: Hu, Ms

## **ANTIGEN PREPARATION**

A synthetic peptide corresponding to the epitope containing a phosphorylation site Threonine 254 of human NFkB/p65 protein. This sequence is identical within human and mouse.

### **BACKGROUND**

NFkB is a heterodimer that consists of a 50 kDa DNA binding subunit (p50/NFkB1)) and a 65 kDa transactivation subunit (p65/RelA). Both of these subunits exhibit sequence homology to the proto-oncogene c-Rel. The p50 has an isoform called p49/p52, and both proteins are derived from the amino-terminal of precursor protein p105 and p100. The p50/p65 heterodimer remains in the cytosol in an inactive form as a complex with its inhibitor, IkB. Upon stimulation of cells by a wide variety of stimuli such as lipopolysaccharide (LPS), pro-inflammatory cytokines (IL-1 & TNF, etc.), and viral infection, IkB is phosphorylated and degraded by proteosome. The active NFkB heterodimer is translocated into the nucleus and induces gene expression. The inhibition of p53 activity is dependent upon phosphorylation of p65 (RelA) at S536 by the upstream kinase IKK beta.

# **PURIFICATION**

The Rabbit IgG is purified by site-modified Epitope Affinity Purification.

### **FORMULATION**

This affinity purified antibody is supplied in sterile Tris-buffered saline (pH7.2) containing antibody stabilizer

# **SPECIFICITY**

This antibody recognizes NFkB p65 with the phosphorylation site Thr254. It does not cross-react with non-phosphospecific peptide.

#### **STORAGE**

The antibodies are stable for 24 months from date of receipt when stored at –20oC to –70oC. The antibodies can be stored at 2oC-8oC for three month without detectable loss of activity. Avoid repeated freezing-thawing cycles.

### **APPLICATIONS/SUGGESTED WORKING DILUTIONS\***

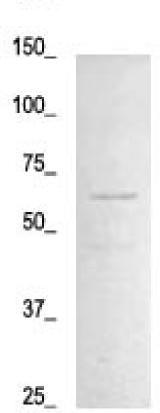

- Western Blot: 0.1-1 µg/ml
- ELISA: 0.01-0.1 μg/ml
- Immunoprecipitation: 2-5 μg/ml
- · IHC: Not tested
- Flow cytometry: Not tested
- Molecular Weight: 65.0
- Positive Control: Kidney Tissue
- Cellular Location: Cell Membrane

<sup>\*</sup>Optimal dilutions should be determined by researchers for the specific applications.

MW kDa Western Blot: The whole lysate derived from Hela (20 ug/lane) immunoblotted by Rabbit anti – NFkBp65(pT254) (Cat# 500-11934) at 1:500. Observed a major immunoreactive band at molecular weight ~65kDa.

Immunohistochemistry: The whole cell pallet Hela (FFPE) stained with Rabbit anti-NFkBp65 (Cat# 500-11934) at 1:200 for 10 min @ RT. Staining of formalinfixed tissue requires boiling tissue section in 10 mM Citrate Buffer, pH 6.0 for 10 min followed by cooling at RT for 20 min.
