

Asy^{Max} Immunoassay Development (Cat# 60021)

Asy^{Max} Bioassay Development (Cat# 60022)

Asy^{Max} Kinase Activity Assay Development (Cat# 60023)

The scientists with abboMax have been involving in immunology and cell biology research/product development for decades. With the state-of-art technology, we can assist you to co-develop immunoassays, bioassays related to immunology, kinase activity along with phosphorylated protein measurement for your specific needs. Please email us (info@abbomax.com) for further discussion. A quote will be supplied when the project is under discussion.

The package includes the following items:

- ❖ Free consultation of assay format selection
- ❖ Co-development of assays and finalization of each parameters
- ❖ Protocol writing, material and assay transferring

Standard Operation Protocol:

Each standard operation protocol (SOP) will be prepared by AbboMax according to your project request prior to the initiation of a project.
