ANTIGEN PREPARATION

A synthetic peptide corresponding to the C-terminus of CD2

BACKGROUND

CD2 is a 50 kD type I transmembrane glycoprotein surface antigen found on all peripheral blood T-cells. It is also known as LFA-2, T11, and sheep red blood cell receptor (SRBC-R). CD2 interacts with LFA3 (CD58) on antigen presenting cells to optimize immune recognition. CD2 has also been reported to bind CD48, CD59, and CD15. CD2 plays a critical role in alternative T cell activation, T cell signaling, and cell-cell adhesion.

PURIFICATION

The Rabbit IgG is purified by Epitope Affinity Purification

FORMULATION

This affinity purified antibody is supplied in sterile Phosphatebuffered saline (pH7.2) containing antibody stabilizer

SPECIFICITY

This antbody recognizes human CD2. The other species not tested.

STORAGE

The antibodies are stable for 24 months from date of receipt when stored at –20oC to –70oC. The antibodies can be stored at 2oC-8oC for three month without detectable loss of activity. Avoid repeated freezing-thawing cycles.
