

## **Rabbit anti Histone H3(Dimethylation at Lys9) Polyclonal Antibody**

**Alternative Name(s): HIST1H3A**

### **Order Information**

- **Description:** Histone H3(Dimethylation at Lys9)
- **Catalogue:** 602-780
- **Lot:** See label
- **Size:** 100ug/200ul
- **Host:** Rabbit
- **Clone:** nan
- **Application:** WB, IP, IF
- **Reactivity:** Hu, Ms, Rt

### **ANTIGEN PREPARATION**

A synthetic peptide containing AR[Me<sub>2</sub>-K]ST in which Me<sub>2</sub>-K corresponds to Dimethyl lysine 9 of human histone H3.

### **BACKGROUND**

Histones are basic nuclear proteins that together with DNA make up the nucleosome structure in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The methylation of specific residues in the histone tails is a central modification for regulating epigenetic transitions in chromatin. Whereas methylation of histone H3 on lysine 4, 36, and 79 has been linked with gene activation, methylation of H3 on lysines 9, 27 and histone H4 on lysine 20 is associated with heterochromatin and some repressed genes with euchromatin. Modified lysine residues can exist in a mono-, di-, or tri-methylated state, while the arginine residues can be mono- or di-methylated. Histone H3 Lys4 trimethylation (H3-K4me<sub>3</sub>) is a conserved mark of actively transcribed chromatin. This antibody is specific for histone H3 Di-methylated at K9. The sequence is found in all mammals and a wide range of species, including *D. melanogaster*, *Arabidopsis*, Chicken and *Xenopus*. The antibody will react with any of the above species where the Dimethylation modification is present.

### **PURIFICATION**

The Rabbit IgG is purified by site-modified Epitope Affinity Purification.

### **FORMULATION**

This affinity purified antibody is supplied in sterile Phosphatebuffered saline (pH7.2) containing antibody stabilizer

### **SPECIFICITY**

This antibody only recognizes ~ 17 kDa of Dimethylated Histone H3 at K9. It does not cross react to non-methylated H3 or mono-, Tri-methylated Histone H3.

### **STORAGE**

The antibodies are stable for 24 months from date of receipt when stored at -20°C to -70°C. The antibodies can be stored at 2°C-8°C for three month without detectable loss of activity. Avoid repeated freezing-thawing cycles.

### **APPLICATIONS/SUGGESTED WORKING DILUTIONS\***

- Western Blot: 0.1-1 µg/ml
- ELISA: 0.01-0.1 µg/ml
- Immunoprecipitation: 2-5 µg/ml
- IHC: 2-10 µg/ml
- Flow cytometry: Not tested
- Molecular Weight: 17.0
- Positive Control: Kidney Tissue
- Cellular Location: Cell Membrane

Western Blot: The nuclear extract derived from 3T3 were immunoprecipitated by 4 ug of Rabbit anti-Diimethyl Histone 3 (K9) (Cat#602-780), then probed with Rb anti Dimethyl Histone 3 (K9), (Cat # 602-780) at 1:1000. An immunoreactive band at ~17kDa is observed. Note: ~50 kDa and ~22 kDa are the rabbit immunoglobulin heavy and light chain
